APPENDIX II

CATALOGUE OF ILLUSTRATED POTTERY FROM THE UDAL

II.1: POTTERY FROM LEVELS XIV TO XI

14,947

Fig. 13 no. 1

Level Provisional XII. Primary infill to Silver Building; Square J

Appendix I.1, page 69.

Complete vessel: bucket shape Pieced by C. Sease.

14 rims; 4 bases; 60 misc.; 40 body; Total: 118; Weight: 2,535g.

Fabric A. Colour: Brown/grey-brown
brown

Rimtop: flat curve; diameter 24-25cm; angle 80° - 86°. 9mm thick;
tongue and groove construction, 4.4cm long, straight.

Body: 4 slabs, T&G construction; 9-12mm thick.

Base: flat; 10.5-11cm diameter; sharp angle, 69° - 75°; T&G
construction.

Soot: little exterior soot on rim and 2 lower body slabs on
interior lowest body slab.

Surface: finger smoothed; construction marks show as ridges internally
but on outside fairly even, smoothed profile.

This is the most complete of the simple bucket shaped forms. There
is a slight curve at the bottom of the rim slab but not sufficient
to describe as a shoulder.

11,761

Fig. 13 no. 2

Level XI.2A. Square O₃

Appendix I.1, page 15.

2 rim#s: Fabric A; colour: soot/brown/black/grey-brown; 6-10mm thick.
soot

Rim length: 3.5cm; T&G construction; straight sided vessel.

Diameter c. 34cm.; Rim angle to horizontal c. 81° but rim rather
irregular and difficult to measure easily - similarly the diameter may
be exaggerated by the irregularity of the rim. Exterior surface fairly
smooth.

Weight: 128.3g.

14,151

Fig.13 no. 3

Level XI.22. Square OP.

Appendix I.1, page 28.

2 rims: Fabric A; colour: soot/brown; 6-8mm thick.

Rimtop flattened; rim length - 2.7cm; T&G construction, c. 13cm diameter; 82° to horizontal.

Weight: 35.3g.

14,794

Fig.13 no. 4

Level XI.23. Square O/P

Appendix I.1, page 62.

Nearly complete vessel: shouldered jar form. Pieced by C. Sease.

23 rims; 4 bases; 86 misc.; 62 body. Total 175. Weight: 2,416.5g. Fabric A.

N.B. Registration number 14,794 includes 75 other sherds which do not belong to this illustrated vessel. These have not been included in this description but can be found in the Archive Appendix.

Colour: brown/buff; buff-cream/orange/black; buff/black/grey.

Rimtop: flat or slightly curved; diameter 26cm; angle 63°- 66°; 5-9mm thick; T&G construction, 3.1cm long; slight shoulder below rim slab.

Body: 4 slabs; T&G construction; 8-11mm thick.

Base: flat; 15cm diameter; sharp angle 73°- 75°; T&G construction 8-9mm thick.

Soot: exterior top 2 slabs; interior on lowest 3 slabs

Surface: rough and lumpy exterior, with creamy deposit near base; some horizontal striation on interior and fingering on rim.

This vessel is fairly typical of the large shouldered jars. As only one third of the base is present some addition has to be made to the weight to allow a weight equivalent to be calculated.

Reconstructed Weight: 2,930g.

17,304

Fig.13 no. 5

Level XI.3 (floor). Square CC

Appendix I.1, page 64.

3 rims and 4 body sherds: Fabric A. Colour: soot/brown/grey/brown, 6-13mm thick.

Rim-slab - 3.9cm; T&G construction, 2nd slab c. 3.4cm long. 30cm diameter; rim angle c. 89° to horizontal. Rim - very close to vertical and its external surface is in fact more than 90° to horizontal.

Shouldered jar-form.

Weight: 177.2g.

Fig. 13 no. 6

Level XI.11. Square D

Appendix I.1, page 23.

2 rims: Fabric A. colour: brown/grey/grey-brown; 6-7mm thick.

Rim length - not known as no clear construction join but it appears to be from a slightly shouldered vessel. Diameter: 8cm; Rim angle: c. 72°.

Weight: 16.4g.

14,375

Fig. 13 no. 7

Level XI.22. Square P.

Appendix I.1, page 76.

4 rims and 5 body, and 4 misc.; Fabric A. colour: soot/brown; 5-10mm thick.

Rim slab - 4.3cm. T & G construction; second slab 4.6cm long. 34cm diameter; 73° rim angle to horizontal.

Very slight shoulder and flaring rim.

Weight: 166.5g.

Level XI.1. Square O₃

Appendix I.1, page 75.

10 base-sherds and 4 body sherds, and 3 misc.; fabric A. Colour:
darkened-brown/grey/brown; 8-11mm thick;

Flat base; sharp angle; T&G construction, c. 10cm diameter; 76° body angle.

Small finger marked cross on the internal surface of the base; one finger mark crosses the other at roughly right angles; grooves only c. 5mm deep at maximum.

Weight: 329.8g.

brown/

5 base sherds: Fabric A. Colour: blackened-brown/black/grey;
8-12mm thick.

Flat base; sharp angle; T&G wall. c. 11cm diameter; c. 74° wall angle.
Internal surface has the remains of a finger-marked saltire cross;
this has been made when the clay was wet by dragging a finger across
the bottom of the vessel, first in one direction and then diagonally
across the first mark. The cross is central to the base and runs
to near the beginning of the basal angle.
Weight: 191.4g.

Appendix I.1, page 36.

Base sherd: Fabric A. Colour: blueish-black/orange-brown; 4-15mm thick.

Flat base, sharp angle; c. 12 cm diameter.
Crossmark on internal surface of base; right angled cross; less
than a half survives but shape is fairly clear.
Weight: 97g.

Fig.18 no. 6

Level Nickold's 3 Floor. Square CC

Appendix I.1, page 85.

Nearly complete vessel; shouldered jar form; pieced by C. Sease.

8 rims; 17 base; 13 misc.; 33 body; fabric C; total: 71;

Weight 1283.6g. Colour: orange-buff/black/grey-brown

cream-grey / grey-brown

Inclusions: quartz, mica, little grass.

Rimtop: flat or slightly curved; 17cm diameter; angle 73° ; 7-10mm thick; T&G construction, 4.2cm long; quite well pronounced shoulder.

Body: 3 slabs; T&G construction; 8-10mm thick;

Base: flat, 11cm diameter; sharp angle c. 68° , T&G construction; 9mm thick.

Soot: on exterior of top 2 slabs; on interior bottom 3 slabs.

Surface: lumpy and flaking; exterior fairly dense and finger smoothed.

This shows a more pronounced shoulder than 14,794. It has not been possible to distinguish between slightly and more strongly shouldered vessels. All have been classed as one group.

soot

7 base sherds, 24 bodysherds and 9 misc.: Fabric A. Colour: buff-brown/
black/grey-brown. Glued lower section of vessel.

Flat base with 'sharp' basal angle; c. 9.5cm diameter T&G wall construction with 3-4 wall slabs surviving. Basal angle c. 65°- 73°. This appears to be a truncated bucket-shaped vessel. Its shape is distorted and the vessel was badly shattered when found.

As reconstructed its base is round but the superstructure is oval measuring c. 19cm by c. 15cm at the top of the surviving vessel. The top of the vessel including the rim has been cut off though whether accidentally or not is not clear. It is not certain if the rim was about to flare out or rise straight up, but it appears to have been truncated at the bottom of the rim slab just as a slight out turn may be beginning.

Exterior surface rather rough, with some finger smoothing. Soot occurs irregularly on the upper two slabs, and irregularly in the exterior.

13 rims; 58 base frags.; 12 misc.; 10 body sherds;
93 sherds in total; weight 3,370g. Fabric L. Colour: brown/grey-brown.

Rimtop: abraded, flat curve; diameter 28 x 27cm. Curves in slightly
at rim; c. 93°-98° to horizontal.

Body: 8-11mm thick; slightly convex wall: 30cm diameter at widest;

Base: sags irregularly c. 3cm or more; base angle 'rounded'; 8mm
thick; Base/wall angle c. 127°.

Construction: irregular strips; covered over by finger smoothing
leaving vague linear irregularities; probably 'angled slab' joins.

Soot: on exterior surface from basal angle to 5cm below rim.

on interior of base and 3cm above angle.

This is the most complete of the large sagging-base pots.

Reconstructed weight: 3,570g.

9 base fragments; 1 body sherd: Total 10; Weight: 403.4g. Fabric E.
Colour: soot/brown/black/grey-brown.

Fabric E: sparse quartz, little mica, dense grass temper -
chopped grass and seeds visible.

Wall: 6-10mm thick; fairly straight;

Base: sagging; base angle 'rounded'

Construction: clear strips with 'angle slab' joins.

Surface: smooth but lumpy.

Weight: 403.4g.

Base rather abraded but clearly grasstempered rather than grassmarked.
Although these sherds are of fabric E they are visually quite
distinct from the level XI fabric E and are paralleled better among
the Viking pottery. Vessel form is best paralleled among the
convex-walled sagging-based bowl-forms.

Report on the petrology of sherds from the Udal,
North Uist. by Dr D.F. Williams, Dept of Archaeology,
The University, Southampton.

A representative selection of twenty sherds were submitted for petrological analysis. All the sherds were studied macroscopically with the aid of a binocular microscope, and then examined in thin section under the polarizing microscope. The majority of samples (pre-Norse, nos 1,2, 8,9,12,17,18,19,20, and Norse, nos 4,5,6,7,10,11,13,15) contain the same range of principal inclusions, namely: ill-sorted subangular grains of quartz, plentiful discrete grains of reddish-brown, or more usually green, hornblende, feldspar (normally plagioclase and microcline), mica, a small amount of pyroxene and garnet and occasional fragments of hornblende-gneiss. Small fragments of the latter rock, with a distinctive black and white appearance made up of white lenticles of feldspar and dark hornblende, can be seen in fresh fracture in some of the sherds, though it is more common to see discrete grains of these minerals spread throughout the clay. It is difficult petrologically to draw a distinction between pre-Norse and Norse samples. This material is undoubtedly derived from the Lewisian Gneiss and associated rocks which occupy much of the Outer Hebrides. The thin sections appear to be fairly homogeneous, and so a source for

the pottery in the Udal area would seem to be indicated.

Sherd no. 15 has grass impressions on the outer surface, but there is no evidence for vegetable matter actually occurring in the clay itself. A small amount of shell was identified in no. 6.

The remaining three sherds examined stand apart from the main group, though there are certain similarities which they share with the other samples. Sherd no. 3 (pre-Norse) and no. 14 (Norse) also contain discrete grains of green hornblende and felspar (no. 14 also has a little shell), though in addition no. 3 has frequent grains of biotite, and no. 14 contains a number of elongate voids commensurate with the vesicular nature of the sherd, and no doubt representing grass tempering.

The 11th century grass-marked platter, no. 16, is a finer-textured sherd than the other samples examined. It contains a little green hornblende and altered felspar and a large fragment of a garnetiferous hornblende-gneiss rock. Also present are a number of discrete red minerals which may be serpentine.

III.2

The frequency of construction marks on Dark-age pottery at the Udal.

Example:

Level XI.1, Appendix I.1, page 22.

35 bags of pottery

Total number of bodysherds: 144

Tongue-and-groove marks: 83; 58%

N.B. Construction marks only occur on some of the bodysherds of vessels made with the tongue-and-groove technique. The absence of such marks on c. 40% of sherds in this instance indicates only that they are broken from other parts of the vessel, not that another construction technique was used.

A' CHEARDACH BHEAG, SOUTH UIST

Finds in Hunterian Museum. Fairhurst 1971.

Fig. 28 no. 11

Fairhurst find no. 31; Hunterian A 1974, 33.

Rim: Colour: blackened-brown/black/brown.

Flattened rimtop; 9-11cm thick.

Rim curves inwards slightly.

Not bowl form as suggested in Fairhurst 1971, fig. 6, no. 1.

Fig. 28 no. 9

Fairhurst find no. 124. Hunterian A 1974 33

3 rims: Colour: grey/black/grey;

Curved rimtop; 8-11mm thick.

Angle uncertain but probably inturns.

Fig.28 no.8

Fairhurst find no. 17. Hunterian A 1974 33

Rim: Colour: blackened-brown/black/buff/black. 10mm thick.

Flattened surface with irregular stabbing along rimtop.

Fabric: quartz and little mica. No angle measurable.

This find number is not in Fairhurst's catalogue and has no provenance.

Fig.28 no.12

Fairhurst find no. 80. Hunterian A 1974 31

7 rims and 11 body sherds: Colour: soot/grey-brown/black/grey-brown; 11mm thick.

Abraded rimtop;

Diameter c. 20cm.

The degree of incurve of the rim varies round the diameter.

This could be from a bowl form but the absence of the lower profile prevents any real definition. The hooked rim shown in Fairhurst 1971, fig. 9, no. 3, only occurs on part of the diameter.

The fabrics of numbers 80, 31 and 17 and some of the other coarse ware sherds in the assemblage are very similar, and can be compared reasonably closely with some of the Udal Fabric 'L' pottery.

Fig.28 no.7 & 10

Fairhurst find no. 85 . Hunterian A 1974 33

2 rims: Colour: buff/grey; 6-8mm thick.

Flattened rimtop. 13cm diameter. Incurved rim; clear internal slab joins; fairly smooth surfaces.

This possible cup form comes from Wheel house II and consequently could be late.

Fairhurst's finds-numbers refer to the numbers marked on the sherds and to his published catalogue (Fairhurst 1971).

UNPROVENANCED

ORKNEY OR SHETLAND

Find in Hunterian Museum. Hunterian B 1914 1035, part I.

Part of the A. Henderson Bishop Collection, donated in 1914.

Fig. 28 no. 13

Base sherd: Colour: soot/black/black. Wall 5-9mm thick; Base 10mm thick.
brown

12cm diameter measured at basal angle; sagging base, rounded base angle, dense exterior grassmarking.

Fabric: no grit visible under soot; texture fairly hard and dense. Sagging based bowl-form.

The attribution to Orkney or Shetland may have been a guess made by the Museum, and consequently may be of questionable value.
